

WHAT WOULD YOU DO IF YOUR SERVER JUST DIED?

Could you have it back up and running again in minutes to the Exact State as of 15 minutes ago?

With Recover *IT* you can!

Recover *IT*[™]
The Disaster Prevention System

Assess the Risks

Think about the importance of your systems to your business processes. 'Mission-critical' systems are vital to your business. Such systems may include:

- A database used by customer service to respond to telephone enquiries or used to respond to queries on an e-commerce website
- An accounting system relied on to give up-to-the-minute receipts and payments information, accurate cash-flow projections
- Key management information on which you base crucial business decisions
- Commercially sensitive information such as your price lists or customer details
- Personal details on employees or people who partner you in delivering your business activity

Analyse the Impact of a Disaster

'Mission-critical' systems need to be highly reliable, and repaired quickly if they fail. Otherwise the costs you incur due to a disaster may include:

- A less productive workforce for the full duration of the outage, at full cost to the business
- Delays and errors leading to customers not receiving goods and services they have ordered, perhaps pushing them to deal with alternative suppliers
- Time wasted in correcting errors and restoring customer goodwill, at the expense of winning new customers
- An expensive repair to ensure that you can get data back from a crashed server

Recover IT **Keeping your Business on Track**

Recover IT is designed to ensure that a server collapse remains no more than inconvenience, not a disaster!
Recover IT works like this:

Step 1

Recover IT takes an initial snapshot of your server(s) which is then copied to a separate storage unit. Daily or hourly snapshots of the changed data are then taken and added to the information already stored. The frequency of these updates can be customised to suit your business needs.

Step 2

In the event of a localised incident causing existing server and other network devices to be unavailable, *Recover IT* planned response is activated – simply by a call to Motherboard technical support.

Step 3

Your data safely contained in the storage unit is retrieved pending transfer to a new work environment.

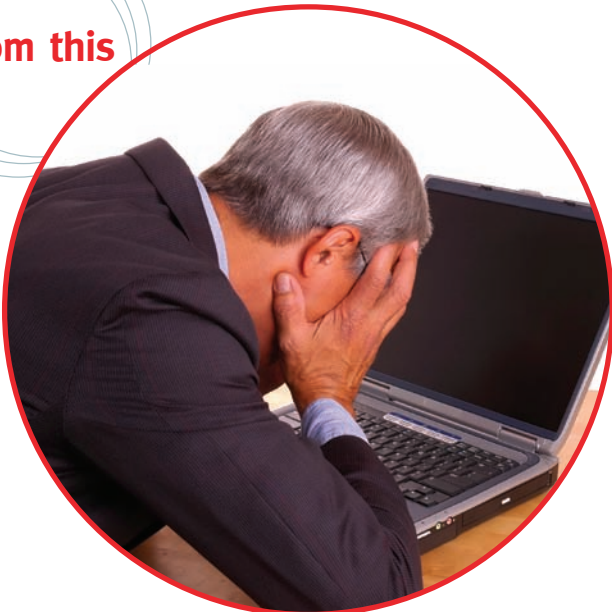

Step 4

Recover IT servers are deployed to your office with full Motherboard technical resources in place to ensure fast installation.

Step 5

Your full IT infrastructure – all your mission-critical systems, e-mail, files and databases – are now back in operation while the original server(s) is repaired or replaced by our qualified technicians.

...in minutes with

Recover IT™
The Disaster Prevention System

A Full Solution

Recover IT is a turnkey recovery solution to any IT disaster scenario, with a rapid response and data fully accessible within minutes of call-out.

Constantly Monitored

Our team of in-house engineers constantly monitor all of our *Recover IT* clients. In the event of a disaster to your IT infrastructure we will be the first to know.

Managed Remotely

As all management, testing and software updates are managed remotely as part of the service, *Recover IT* will never intrude on the day-to-day running of your business – except when you need it!

All-Inclusive

The *Recover IT* service includes all costs, including all hardware, software, full set-up and monitoring. In the event of a disaster Priority Response and the time of our qualified technicians is also fully covered.

Non-Committal

Recover IT is an ongoing service that requires no fixed-term commitment. If at any stage you wish to discontinue coverage all you have to do is to tell us!

Affordable

Recover IT is the most affordable Disaster Prevention solution available in Ireland.

One Solution for Real-Time

DATA PROTECTION, DISASTER PREVENTION, RAPID DISASTER RECOVERY

Three very good reasons to use

Recover IT

One

Fast Disaster Recovery

Recover IT restores a crashed Windows™ Server typically in minutes – not hours! Rapid complete restoration of your operating system, data files, e-mails and databases can be accomplished within minutes of call-out.

Two

Real-Time Data Protection

Recover IT enables companies of any scale – small, medium or large enterprises – to protect all valuable data, e-mail and databases. Using the latest 'Set & Forget' Real-Time imaging technology, *Recover IT* creates snapshots of your system up to every 15 minutes with no impact on production systems, networks or your users.

Three

Restore onto any type of Server

If the disaster includes loss or damage to your server, *Recover IT* will get you back up and running on an independent server with virtually no data loss – and no incompatibility problems.
